DETAILED ACTION

1. Claims 1-2, 4, 6-27, 29-38, 40-48 & 50 are pending in the application.
2. Claims 3, 5, 28, 39 & 49 have been canceled.

Allowable Subject Matter

3. Claims 1-2, 4, 6-27, 29-38, 40-48 & 50 and re-numbered as claims 1-45 respectively are allowable over the prior art of record because the cited references do not contain the specified limitation of a signal recovery method for a self-clocked transmission system, comprising the steps of: equalizing a received data signal to form an equalized data signal; integrating the equalized signal; inputting the equalized data signal to both a first monostable circuit component and a second monostable circuit component; generating a first output signal from the first monostable circuit component and a second output signal from the second monostable circuit component; comparing the first output signal and the second output signal to each other using a first logical operator; outputting a compared output signal based on the comparison, wherein the compared output signal is a recovered clock output signal; and generating a third output signal by comparing the integrated equalized data signal to a peak threshold.
